

What are Azure Security Services for Businesses?

Azure security services for businesses help safeguard data, applications, and systems in the cloud.

What are the three security services provided by Windows Azure?

Azure provides three vital services to businesses looking to secure their cloud system:

- **Azure Active Directory** - A cloud-based identity management solution that secures access to applications and data
- **Azure Security Center** - A centralized security management platform that provides real-time visibility into cloud security
- **Azure Key Vault** - A secure key management service that helps manage encryption keys

What are Azure security features?

- Data encryption
- Network security
- Access control
- Compliance and auditing
- Threat protection
- Multi-factor authentication
- Security reporting and analysis

What are the benefits of Azure security services

- Increased security and privacy of data and applications
- Improved compliance with industry and government regulations
- Real-time visibility into security
- Better cost savings

Bettering your Expectations
