

SharePoint Online Optimization for Business Success

Table of Content

- **Introduction**
- **Components of SharePoint**
- **Need for SharePoint Online Optimization**

Introduction

- **SharePoint Online** empowers businesses with a vast array of functionalities, including site collections, subsites, lists, document libraries, wiki pages, blogs, and discussion boards.
- It fosters seamless team collaboration and integrates with Outlook, Planner, and Microsoft Teams for enhanced productivity

The Components of SharePoint

SharePoint consists of three major components that form the foundation of its functionality

Sites

Web parts organize content, helping businesses categorize information efficiently.

Pages

Pages display content with web parts, offering a flexible way to showcase information on sites

Web Parts

Web parts store content, like docs, events, and contacts, for customized SharePoint sites, like smartphone apps.

The Need for SharePoint Online Optimization

- ◆ Optimizing with Content Delivery Network (CDN)
- ◆ Enhanced Navigation
- ◆ Optimizing Images for Improved Performance
- ◆ Limiting the Usage of iFrames
- ◆ Optimizing Page Weight
