Lake Dathée

On Tuesday the 24th, we visited Lake Dathee in the presence of a river technician from the Vire to the Noireau.

Lake Dathee is an artificial lake located in Normandy, in the Calvados department, near Vire. It was created to supply drinking water to the region. Today, it is also a popular place for outdoor activities such as hiking, fishing, sailing, and nature observation.

He explained to us the usefulness of a dam, the role of hedgerows on embankments, as well as the migration of brown trout and salmon.

Marsh of Grand Hazé

On monday the 23th, we visited the Grand Hazé marsh. During the guided tour of the marsh, we were able to observe and understand the biodiversity and the need for protection of this area. Once covering 600 hectares, the marsh now covers 200 hectares.

The Grand Hazé marsh is a sensitive natural area classified as a Natura 2000 site, located in the municipalities of Briouze and Bellou-en-Houlme. It is the largest wetland in the Orne department.

The Mountain

A small lizard living between the woodpiles and moss

The digging of a hole for the pond. We encountered a large granite boulder that had to be removed.

The finished pond

BIODIVERSITY

With a plastic pond, and moss.

A piece was added to the garden's ecosystem.

We traveled five minutes up a mountain to reach a garden ment to help the biodiversity in this area.

By digging and placing plastic

ponds, we created water areas for amphibians

like frogs, lizards and insects to elope.

Homes

To home different types of animals the garden has birdhouses, insecthotels, ponds and piles of wood for small animals to hide under.

Cote d'Ivoire

WELCOME

In this presentation we learned about:

How they treat water in Afrika in the parts that have a lot and the parts that don't have a lot and how they deal with it.

We also learned the pros and cons of the ways things are done and how they could improve to make sure they keep the water good

At the end we did a kahoot on what we learned

Soulevre viaduct

This is pilar of bridge

On Tuesday the 24th, we visited the viaduct
During the visite, we have discovered the history of the bridge. It's a old line of train destroyed and transformed into adventure base in 1970. The creator of plan of this bridge is Gustave Eiffel, architect of Eiffel Tower.

This is Maxime on the back of Ethan because he can't walk in the path

This is a river of Soulevre

***we went climbing
on the Mountain
across the
accommodation***

There were 4 ropes and you could pick one rope with 2 persons, 1 climber en 2 safety persons. You would climb as far as you could en then you would let the 2 safety persons on de ground know that you want to come down. They would switch positions and would let you safely down.

MOUNTAINBIKE TRIP

Mountainbiking is a test of durability...

While mountainbiking, it's important to know when to switch gears. By switching gears the right way, you will exhaust yourself less than necessary. For me, it was a wonderful trip through the mountains and villages, going up and down steep and small dirt roads.

Each time you have to 'climb' a road, it's better to switch to the lightest gear to avoid straining your muscles

The nature we drove by was stunning, and there was a peaceful calm up in those mountains that's unlike anything else. Sometimes, you had to really slow down and focus, because of steep downhill roads with big rocks and obstacles. It's more important to take your time than to rush and risk injury.
