

## Let's compare the United States to Australia

First of all, the United States are much bigger than Australia since their area is 9.5 million square kilometers, whereas Australia's area is "only" 7.5 million square kilometers. As far as climate is concerned, both countries are so huge that their climate are as different as each other. However, Alaska belongs to the United States. Thus, it is really colder in Alaska than in Australia!

Living conditions are less extreme in the US than in Australia. Indeed, Australia is one of the most dangerous country on earth. Australian animals are way more poisonous than American ones. For instance, scorpions, pit vipers, tarantulas or even jellyfish can be found in Australia.

As far as daily life costs are concerned, the US offer less expensive products than Australia. Indeed, life is cheaper in the US, and people can often negotiate prices. On the contrary, Sydney or Canberra (the capital of Australia) propose exorbitant prices.

Besides, Australia is a very large island whereas the US are a land country. However, both countries are as wonderful and amazing as each other! Even if Australia is surrounded by the ocean, its land region is more arid and more deserted than most parts of the United States. However, some states of the US are as wild and dry as Australia's land region, such as California or Arizona.

To conclude with, both countries are as uncommon as each other and are worth visiting!

### Consignes

1. Repère les 12 comparatifs (supériorité, égalité, infériorité) qui composent ce texte.
2. Pour chacun d'entre eux, rédige une phrase dans ton cahier, qui explique leur sens (pourquoi les USA sont plus [...] que l'Australie ?).
3. Une nouvelle forme de « comparaison » se trouve dans le texte... est-ce que tu es capable de l'identifier ?
