

**ACTIVITY 1: LEGEND** the picture with the given words (1 line = 1 word) — To help you, **READ** the definitions on page 2.

the stern — the bow/prow — the keel — the hull — the deck — the anchor — a funnel — the flag — the mast — Ø lifeboats —  
Ø portholes — Ø propellers and the rudder — the waterline — the look-out post — a wind rose — port side — starboard

**ACTIVITY 1: Words Definitions**

- Traditionally, the **bow** is decorated with a woman figure.
- The **stern** bears the flag(s) of the country where the ship parks.
- The **keel** is the axis of the ship, situated under it.
- The **hull** is the metal shell of the ship.
- There were many **decks** on the Titanic where passengers could walk their dogs or take sunbathes ; the passengers classes were separated.
- The **funnels** are designed for the escape of steam smoke from the ship engine. There were four on the Titanic.
- There were not enough **lifeboats** onboard the Titanic to rescue all passengers.
- The **portholes** are openings in the side of a ship through which light comes from the outside and from which passengers can watch the sea.
- The three massive **propellers** of the Titanic were pieces of machinery composed of three blades that twist underwater and propel the ship to make it move.
- Positioned underwater at the stern of a ship, the **rudder** is a blade controlled by the helm. And that makes the ship turn.
- The **waterline** is calculated by the ship engineers. This line marked on the outside of the ship corresponds with the water's surface when the ship is afloat.
- On the night of the disaster, the crew members on the **look-out post** were not able to see the iceberg in time.
- **Portside** and **starboard** are used to avoid confusions between the two sides of the ship when at sea.
