

What are the Advanced Treatments To Treat Varicose Veins?

According to research, most people are affected by the vein problem called varicose veins. The veins transport the blood upwards against gravity to the heart. When they fail to complete their task, the blood starts pooling in them due to the backflow of blood causing varicose veins. Usually, varicose veins don't harm your health, but they can harm your physical appearance. But if you don't pay attention to them they may lead to leg ulcers. This kind of situation requires [vein treatments near me](#).

Sometimes varicose veins can be painful while walking and if you scratch them, they can cause ulcers. Thankfully, there are varieties of varicose veins treatment to eliminate them. VascuLight laser vein therapy is one of the most popular. You can get the therapy by **vein specialist woodland park**.

What is LASER vein therapy?

Laser technology has been used in several medical operations. It is highly used in many non-invasive cosmetic treatments. Laser technology is considered indispensable for **varicose vein treatment** because there are no side effects associated with it.

The therapy includes the usage of a highly concentrated beam of light. During the procedure, the [vein doctor near me woodland park](#) inserts a disposable catheter inside the vein. When light energy passes through it, affected veins get warmed and collapse. After this, he/she withdraws the catheter closing the vein.

VascuLight LASER Vein Therapy:

This therapy is very advanced and designed by vein specialists after deep research. It can be used to remove spider veins also. The therapy is mainly used to treat larger and deeper veins

known as reticular veins. These veins function on the precise energy level and wavelength of light. In this procedure, a small spot of light travels through the skin and blood absorbs it and destroys the diseased veins. It does not affect the neighboring tissue badly. After some time, the body will absorb the veins and they will disappear eventually. You can get **vein treatment near me**.

The VascuLight laser treatment suits all including men, women, and even children of all ages. Unlike conventional laser therapy, VascuLight has no side effects. The therapy works on the principle of Photothermolysis. It heats the unusual veins making them hold their shape not disturbing the healthy skin at the same time. The vascuLight laser therapy can be done in fifteen to forty-five minutes. You can notice its results in just five to ten days. This technique has become very popular nowadays. It is a completely non-invasive procedure to eliminate varicose veins. After the treatment, you can resume your normal activities again without any downtime.

Cost of the treatment:

The cost of vein treatment depends on the type of procedure and your geographic location. The cost of the treatments includes the doctor's fee and compression stockings aftercare. If you are recommended surgery, you will be charged with a doctor's fee, anesthesia cost, and surgery center's fee, medicines cost, medical tests cost, etc. The medical test includes an ultrasound test that is used to check on blood circulation. If you talk about the cost of EVLT it may range between \$600 to \$3,000 depending on the number of veins to be treated.
