

Spider Vein Treatments: Sclerotherapy VS Natural Remedies.

Spider veins are weblike streaks in purple, red, blue, or grey. Since they resemble the structure of a spider web, they are known as spider veins. You may notice them mostly in the legs or near the ankles in the legs. Moreover, they can be noticed on your thighs or face.

However, they don't cause any serious health issues but are very unsightly causing unattractiveness in the affected area of the body. Not only do they affect your body's appearance but cause emotional distress also. Since medicine has introduced various kinds of advanced methods to relieve these veins, people need not worry about their existence anymore.

Sclerotherapy:

In this procedure, the [vein doctor near me](#) injects the diseased veins with a sclerosant agent directly to the feeder's veins to treat them. This solution allows the vein wall to inflame and stick together making them close. This stops blood circulation through the treated veins that turn into scar tissue and makes them permanently shut eventually.

This is the most preferred method over any mode of vein treatment to deal with larger spider veins and smaller varicose veins as well. Generally, this treatment needs repeated visits to the doctor's office. You may be required 5 to 40 injections each visit. Then, the doctor will apply cotton balls and compression tape during the procedure. After the **vein treatments**, he/she will recommend compression stockings to offer protection against blood clots and in order to promote the healing process effectively.

Your **vein specialist NJ** may remove tape and cotton balls after 48 hours of the procedure and may instruct you to wear compression stockings for a minimum of seventy-two hours or more after the treatment to maintain the treatment results. However, you may require more than one **vein specialist woodland park's** visit depending on the size of the treatment. The results can be reversible if you don't follow the **vein specialist's new jersey** instructions properly. Therefore, follow the guidelines strictly and enjoy the smoother legs!

Side Effects:

- It may be possible that you experience some side effects of the procedure such as burning sensation, leg cramps, red blotches, sores, bruising, and skin discoloration over the affected area.
- When you don't get [vein treatment near me New Jersey](#) from an experienced doctor, it might be possible that he/she won't be able to inject the sclerosant solution properly. You may experience tissue necrosis, and scarring over the injection site. Therefore, it is necessary to get the treatment only from a vein specialist.

- In this case, if your doctor uses too much hardening solution it can result in allergic reactions such as ulcers at the injection site. In most cases, you may suffer from skin discolorations such as brownish pigmentation that can remain over the treated site for about one year.
- Rarely, you may experience other skin problems such as thromboembolism, visual disturbances, thrombophlebitis, skin necrosis (as mentioned), and hyperpigmentation over the treated area.

Alternative Therapies:

- Some of the non-invasive therapies are gaining popularity and in some cases, they are the better choice as they restore veins, reduce pain and offer a more permanent solution than surgery.
- If you visit an honest vein doctor, he/she will suggest some alternative methods before opting for a surgical option. Spider veins may be unattractive but sometimes painful. They are not considered a serious health concern. If you don't get effective results, get **spider vein treatment Clifton** to remove them permanently.
- Moreover, cream and lotions that are produced to fulfill the purpose of getting rid of ugly veins, can be recommended. But if they are used for longer periods may cause harmful side effects. Usually, such types of products contain herbs and essential oils that are effective for healing, healthy blood circulation, and pain-reducing properties.

Additionally, natural solutions are efficient to heal and reduce this painful condition and offer you youthful energy and attractiveness.
