

What Are The Types Of Treatments For Vein Disease?

Are you someone suffering from vein disease? Then you must look for its treatment. It is essential for a patient to fully know about the disease first and then search for its treatment. In this article, we have covered almost every information about vein disease and its treatment that a patient should know, for not missing out on anything make sure to read this article till the end.

Vein disorder is the most common irregularity that appears on the lower legs. There are two types of vein disease:

- Spider veins
- Varicose veins

Spider veins are tiny veins that appear on the legs and face of a person whereas varicose veins are bulgy and large twisted veins that appear on legs and cause pain. These veins are more prone to women due to pregnancy and hormonal changes such as menopause. The major cause of vein disease development is chronic venous insufficiency, heredity, and improper blood circulation that generates blood clot in valves that transfers the blood heart to the lungs.

What is the surgical treatment available for treating veins?

There are many surgical techniques available for treating vein disease including some mentioned below:

- Laser treatment
- Radiofrequency
- Chemical injections

If you want to know more about these surgical treatments of vein disorder then you should visit a vein specialist by booking an appointment.

What are the non-surgical treatments available for veins?

We have some nonsurgical vein disorder treatments that a patient of vein disease should know such as:

- Sclerotherapy
- Laser treatment
- Ultrasound-guided gas sclerotherapy (UGGS)

If you are someone who wants to know more about nonsurgical treatments of vein disorder then you should visit our website and book an appointment with our vein expert.

[When to see a Vascular Doctor?](#)

Varicose veins and spider veins cause similar symptoms except for the fact that varicose veins are large and twisted. We have mentioned some symptoms of vein disease involving varicose and spider vein which shows you require visiting a vascular doctor such as:

- Vein disease cause discoloration in the legs
- Varicose veins cause intense pain and irritation in the legs
- Vein disease left your legs dry and itchy
- A person will be seeing swollen legs
- Vein disease also generates heavy legs

If you are someone suffering from any of these symptoms then you should know visiting a Vascular Doctor is the right decision you should take before it's too late.

Do veins grow back after removal?

Yes, in some cases veins can regenerate after removal or treatment. The regeneration happens when the treatment fails to transfer blood properly which makes the redevelopment of the vein complete.

Takeaway!
