Continue reading the article to know more about the varicose vein.

What does the varicose vein mean?

Varicose veins have twisted, expanded, or grown abnormally thick. The veins in your legs and thighs are where this happens the most frequently. Varicose veins may be an aesthetic issue for some patients and show no symptoms, and this condition may lead to: for some people.

- Legs that be heavy or aching
- Pain that worsens after spending a lot of time sitting or standing
- Color of the skin
- Swelling or throbbing in the afflicted area or burning
- Itching near a vein or veins

If you need clarification about When to see a vascular doctor?

Then here is the answer: when you notice any changes in the body or discoloration, you should go to the doctor for a checkup and get the treatment on time.

Before hopping onto the treatment process, let us know [what is a varicose vein specialist called.](#)

The specialist who treats this type of treatment is known as a phlebologist. They examine and find out the prominent cause of the disease and then treat it accordingly.

What is the latest treatment for varicose veins?

As technology expands, we can see new advancements in the medical field. In the present scenario, there is the use of laser treatments that helps in treating the disease super quickly and at an affordable price. It is important to note that you won't feel any pain when you have laser treatment. As this is a painless treatment, there are more treatments available that you need to acknowledge before having the treatment.

- Sclerotherapy. A medical professional injects a solution or foam into the varicose veins to scar and shut them. The treated varicose veins should disappear in a few weeks.
- There may be a need for multiple injections into the same vein. Sclerotherapy can be performed at a doctor's office without anesthesia.
- Laser therapy. Strong light pulses from laser therapy cause the vein to deteriorate and vanish slowly. Cuts or needles are not applied.

- Procedures utilizing catheters and radiofrequency or laser radiation. The primary method of treating more extensive varicose veins is this operation.
- Vein stripping and high ligation. In this treatment, a vein is tied off just before it merges with a deep vein, then cut out and removed.

What are the advantages of getting the vein treatment done?

Here are some benefits that will help you get the vein treatment done quickly.

- This will reduce the pain you might suffer from vein disease.
- This will also improve your appearance, making your legs more beautiful and building your confidence.
- This treatment will also make your legs and feet more relaxed, letting them move freely, as this will help your legs lessen the heaviness that you might be feeling in your legs.

These are the benefits that the vein treatment provides you with.
