

# When Should We Visit A Vascular Specialist?

**When to see a vascular doctor?** If doctors diagnose a vascular issue or you display typical vascular disease signs, you should consult a vascular specialist. A primary care physician typically refers a patient to a vascular specialist. For instance, you might visit your primary care physician for discomfort and swelling in your leg and learn that you have deep vein thrombosis.

## **What should we expect from a vein clinic?**

**What to expect at a vein clinic?** To get a clearer view of the condition of your veins, your doctor at the vein clinic could do a physical examination. They might examine your legs for spider or varicose veins. In some circumstances, flaky and itchy skin may indicate inadequate blood flow and vein disease. Some vein issues are only sometimes evident at first glance. Your vein doctor might request more testing, such as a vascular ultrasound if they think there might be a deeper vein issue.

A vascular ultrasound creates images of your blood vessels using sound waves. Additionally, it might pick up any anomalies or obstructions. Your doctor can assess the blood cells' velocity and rate of travel inside the blood arteries. They use vascular ultra-sonography to evaluate the condition of the circulatory system. Vascular ultrasound can monitor the success of treatment and make diagnoses.

## **When should we visit a vein clinic?**

Consider visiting a vein clinic doctor if you see any unusual veins in your legs or have ongoing leg pain or discomfort. Since vein disease typically worsens over time, the sooner you receive treatment, the better your prognosis. Here is what to anticipate at your initial appointment if you have never been to a vein clinic.
