

What are the questions asked for vein diseases?

Many people worldwide have vein disease and suffer pain and discomfort daily. Treatment for vein disease is now less invasive if you fear the therapy.

What is a varicose vein specialist called? A doctor specializing in treating varicose veins and other vein conditions or venous insufficiency is called a vein specialist.

Here are some questions that will clear all your doubts:

How common are varicose and spider veins?

Varicose and spider veins are very common; women are more affected by this disease than men, and it often occurs in old age.

Will my insurance cover the treatment options?

It is better if you ask your surgeon before the treatment because most insurance companies cover treatments for varicose veins, and many do not cover them. Any cosmetic reasons, including Sclerotherapy, are not covered by insurance.

How soon will I be able to walk after the treatment?

With new modern technology and less invasive treatment options, you can walk immediately after the completion of the procedure.

Is the treatment painful?

You may not feel much pain, only a small degree of discomfort during treatment, which a patient can tolerate easily. Your surgeon will provide a relaxing and calm environment to ease the discomfort.

What are the symptoms of varicose veins?

In many cases, varicose and spider veins cause no symptoms. However, these veins are often painful. Sitting or standing for hours makes legs with varicose veins feel more threatening. Some common symptoms include:

- Aching pain, burning, and Itching
- Leg swelling and quickly tired legs
- Numbness in the legs
- Heaviness in legs
- Skin discoloration
- Rashes on the legs
- Skin ulcers

How are varicose veins treated?

There are several ways to treat varicose veins. You may be thinking, "[What doctor treats varicose veins](#)" A General Surgeon or a Vascular Medicine Surgeon will perform the surgery. The most minor invasive procedures available provide you with the best and most painless results possible.

Your Specialist will provide you with more details for each technique and which treatment option will suit you the best.

What Do Spider Veins Look Like?

Spider veins generally appear red, purple, or blue underneath the skin's surface. And the pattern seems like a striking spiderweb. They are harmless, considered cosmetic issues, and mostly appear on the legs or face.

What will happen if I do not treat varicose veins?

If left untreated varicose veins can grow worse over time. Varicose veins may cause diseases such as inflamed veins, chronic wounds, or leg ulcers.

Is the Sclerotherapy treatment effective?

Sclerotherapy is the preferred procedure for the treatment of cosmetic spider veins. You may notice the improvement after the initial treatment within 6-8 weeks. However, some patients may need two or three treatment sessions of Sclerotherapy for optimal results. The key is to find the right sclerotherapy treatment surgeon.

Who is the right candidate for Sclerotherapy?

You can consult your doctor if you are opting for the treatment process of Sclerotherapy. During your consultation, your experienced vein doctor will evaluate the condition to determine which sclerotherapy technique is best for you. After the treatment, you will see the optimal results.

Can I resume normal daily activities after the therapy?

Yes, you can go back to your normal daily activities, drive and return to work immediately after the therapy.

Conclusion:

A spider vein is considered a cosmetic issue, but varicose veins are a common problem that can lead to several unsafe conditions, including deep vein thrombosis.

If you have queries or suffer from varicose veins, contact your doctor for the best treatment.
