

# *Which Doctor Is Specialized To Treat Varicose Veins?*

If you want to get your varicose veins treated but don't know **what kind of specialist treats varicose veins** then the answer is a Vascular surgeon or phlebologist. The vascular surgeon is responsible for diagnosing, managing, and treating conditions in your veins and arteries. These specialists treat a various range of health problems. For less troublesome spider veins and varicose veins to life-threatening aneurysms.

They also help the patients manage severe or chronic venous conditions throughout their life. Vascular surgeons treat many conditions that affect the blood arteries and veins in every part of the human body excluding the heart and brain. It is important to choose an experienced and skilled vein specialist who knows how to handle serious and complex cases which normal doctors find difficult to treat.

## How do varicose vein specialists make diagnoses?

To make a diagnosis, your varicose vein specialist or vascular surgeon will start with the physical exam as well as ask you about your medical history, symptoms, and lifestyle. For further diagnosis, the vascular surgeon may also recommend a non-invasive test called a doppler ultrasound of the leg. The test uses the sound wave to see the blood flow in the veins through the valves to detect the blood clot.

## Is there a way to stop spider veins from returning?

There are several treatment methods such as laser treatment to remove spider veins from your body. But there's no particular way to stop them from occurring again. Many patients who want to remove their spider veins ask [Do Spider Veins Come Back After Laser Treatment?](#) The spider veins that are treated won't return but there's a possibility of forming new spider veins in a different part of your leg because our body is forming new blood vessels continuously with the healing process. Especially if you have a family history with varicose veins. So there's no treatment, surgery, or medicine to prevent the future spider veins from showing up.

## Is varicose veins removal worth the treatment?

Many people who are suffering from varicose veins wonder, **Is it worth getting varicose veins removed?** Varicose veins usually won't cause much trouble except for affecting the physical appearance so they do not always need to get treated. But if they are causing pain or discomfort in your legs affecting your lifestyle then you can surely consider varicose vein removal treatment. If the problem is not too serious then the vein specialist first recommends you some self-care measures such as compression stockings, regular exercising, etc. if your venous condition is severe and causing complications then the specialist may recommend other treatment methods suitable for your case including laser treatment, sclerotherapy, radiofrequency ablation, endovenous laser treatment, endothermal ablation, and surgery.

## Conclusion

From the above-given matter, we got some valuable information regarding varicose vein treatment, Varicose vein specialist, diagnosis and tests of varicose veins, is it worth getting varicose veins removed, and more.
