

Improve The Look Of Breast With Breast Augmentation:

Breast augmentation is a type of cosmetic surgical method which is conducted to enhance the size and shape of a woman's breasts [Houston Beauty](#) by installing a saline-filled implant with a silicone shell under the breast. The procedure can be performed at **Houston Cosmetic Surgery Center**.

Why do women opt for breast augmentation?

In most cases, women wish to undergo a **Breast Augmentation Houston** procedure when they feel their current breast size is too small or disproportionate to their body size. In some instances, the breasts may be unevenly developed and a breast augmentation procedure is preferred to rectify the problems. Women, who notice that their breast size has reduced after pregnancies, also need to rebuild their breast size through breast augmentation. Also, those women who have experienced a mastectomy often want to have breast augmentation.

What are the benefits of breast augmentation?

Breast augmentation offers the breasts larger and fuller. The effects may not resemble exactly like natural larger breasts. The breasts should be a bit rounder and less saggy than natural breasts of the same size.

What is the least age requirement for breast augmentation?

A woman needs to be at least 18 years of age to experience breast augmentation.

Procedure for breast augmentation:

Breast Augmentation Before And After:

If you have decided to go through **Breast Augmentation Before After surgery**, it is done in an outpatient surgical center. After the procedure, the patient can return back to his/her normal daily life without any discomfort or pain.

This method is conducted under the administration of general anesthesia so that you won't feel any pain or uneasiness during the procedure. You have to just follow the surgeon's instructions before the [Breast Lift Surgery Before And After](#).

The surgeon will set your breast implants making one or three types of incisions.

- inframammary (underneath your breast)
- axillary (inside the underarm)
- periareolar (in the tissue circling your nipples)

The surgeon will then make a sac by dividing the tissues of your breast from your chest muscles and tissue. Then, he/she will place implants within these pockets or sacs at the center, inside your breasts.

If the patients have opted for saline implants, the surgeon will occupy them with sterile saline once the shell has been set completely and successfully. If you opt for silicone, they are already loaded.

When your surgeon has set your implants properly, he/she will shut the incisions with stitches. Furthermore, he/she will bandage the wound using surgical tape and glue. You will be under inspection until you get recovered and then will be allowed to go home once the anesthesia's impact wears off enough.

Cost of Breast Implant Surgery:

In Houston, breast augmentation costs can range from \$5,500 to \$8,000, relying on several factors, including the experience of your surgeon. The cost also differs depending on facility expenses and whether you choose silicone gel breast implants or saline breast implants.

If you want to have toned breasts, consult your cosmetic surgeon to discuss the procedure thoroughly so that you don't have any doubts regarding the breast augmentation procedure.
